Because Lightroom has always been regarded as an image manager first and foremost, and Photoshop as a professional toolkit, Adobe does not provide an easy way to identify what you've done in Lightroom. Now, you can finally treat Lightroom like a (more than) standalone application. Adobe Photoshop CS5 has made some great strides in its image retouching capabilities. I've used the new Content-Aware tools before, and I've found them to be very good. Creating a reasonably accurate cutout of a face now is a snap, and the program's new \"Moisture\" tool is superb. I've also reviewed the powerful \"Lens Blur\" tool, which lets you blur entire objects. I am a new user and I found a type of CS6 I need before my \$9,759, which is why I need to use the desktop app, but your review allows me to check whether your review really applies to the PS CC 2018 software or not; and I am satisfied more, but it is too early to say, as you said \"is not a well-defined and conclusive review.\" I think it would be nice if you could provide us with definitive answers on the iOS issues at the end of your review so that we can hear the standards that you used to evaluate iOS issues.
